## Preface

There has been an acceleration in the process of environmental awareness in Samoa over the past few years due to the combined activities of various environment and development organisations. The Samoan public through the media, is exposed daily to environmental terms which have a variety of translations. There is not only inconsistencies in the more established terms, but there is also no clear consensus regarding several new environmental words. Most of these words are alien to the Samoan language and therefore, no direct translation of them. In this case, a Samoan word has been adopted directly from its English pronunciation, e.g. the word AEROBIC is translated into "Aeropi". Such newly adopted words are typed in "italics" in this glossary.

This is the first compilation of a glossary on Samoan environmental terms, which will be disseminated to translators, educators and media.

We hope you will find this glossary useful.

## Introduction

The Samoan public has been exposed over the past few years to a large number of new environmental words. The media and environmental organisations have been hard pushed to translate these terms and the result has been an overlapping of efforts, often arriving at different translations.

As a major step towards streamlining efforts and achieving a consensus on Samoan translations, the Siosiomaga Society has compiled this glossary.

The process involved the compilation of a selection of more commonly used environmental words which did not already have established meanings. Persons from organisations involved in the translation of the environmental words were then invited to attend two workshops in order to find suitable translation for those words. Represented among others were religious denominations, the Division of Environment and Conservation (DEC), the Government Translation Section of the Legislative Department and the Education Department.

Oliver Iosefa with input from the Government Translation Section drafted the working list which the participants at the two workshops refined. The modified list was then distributed for further comments before the final list was compiled. The need was also raised by the Society on the revival of glottal stops emphasis and stresses to facilitate the exact pronunciation of these words. Messrs. Papali'i Afele and Dion Ale of the Society undertook this task. We hope that as new environmental words enter the Samoan vocabulary, they will be accommodated within this glossary to enhance better understanding of environmental issues both in the local and international context.

We gratefully acknowledge funding from the South Pacific Regional Environment Programme (SPREP) under its UNDP-funded project which provides assistance to countries with development of National Environmental Management Strategies (NEMS). This Glossary arose out of a need identified during the preparation of Western Samoa's *National Environment and Development Management Strategies* and *State of the Environment Report*.
